1.0 SCOPE OF EVALUATION

This Research Report addresses compliance with the following Codes:
- 2015 and 2012 International Residential Code (IRC)

Kooltherm® Insulation Boards have been evaluated for the following properties:
- Physical properties
- Surface-burning characteristics
- Thermal resistance
- Attic and crawl space installation
- Air permeance

See Table 1 for applicable Code sections related to these properties.

NOTE: This report references 2015 Code sections with [2012] Code sections shown in brackets where they differ.

2.0 USES

Kooltherm® Insulation Boards are used for non-structural thermal insulation in ceiling and floor assemblies, and door cavities in all Types of construction. In exterior walls, use of the insulation boards is limited to Type V construction, except when used on exterior walls of one-story buildings complying with IBC Section 2603.4.1.4.

Kooltherm® K10 Insulation Boards may also be used in attic and crawl spaces without an ignition barrier when installed as per Section 4.2.

The insulation boards may be used as an above grade exterior insulation on concrete slab edges, foundation walls, and may be used under flat concrete slab-on-grade construction, except in areas where termite exposure, as defined in IBC section 2603.8 [2603.9] and IRC section R318.4, is "very heavy".

The insulation boards may be used as an air barrier material in accordance with IECC Section 402.5.1.2.1.

3.0 DESCRIPTION

3.1 General:

Kooltherm® K15, K8, K7, and K12 Insulation Boards are phenolic foam core insulation boards with composite foil facers on both surfaces.

Kooltherm® K10 Insulation Boards are phenolic foam core insulation boards with a glass fiber tissue-based facing on the back surface and a composite foil facer on the exterior surface.

Kooltherm® K20, K5, and K3 Insulation Boards are phenolic foam core insulation boards with a glass fiber tissue-based facing on both surfaces.

The Kooltherm® insulation boards are supplied in thicknesses ranging from 25mm to 75mm, except for Kooltherm® K10 which is supplied to a maximum thickness of 120mm.
3.2 Performance Characteristics:

3.2.1 Surface Burning Characteristics: Kooltherm® Insulation Boards have a flame spread index of 25 or less and a smoke developed index of 450 or less when tested in accordance with UL 723 (ASTM E84).

3.2.2 Thermal Resistance: Kooltherm® Insulation Boards have thermal resistance values as listed in Table 2.

3.2.3 Air Permeability: Kooltherm® Insulation Boards have an air leakage rate as listed in Table 3 when tested in accordance with ASTM E2178.

4.0 INSTALLATION

4.1 General:

Kooltherm® Insulation Boards must be installed in accordance with the manufacturer’s published installation instructions, the applicable Code, and this Research Report. The manufacturer’s published installation instructions and this Research Report must be strictly adhered to, and a copy of the instructions must be available on the jobsite during installation.

Kooltherm® Insulation Boards must be separated from the interior of the building by a thermal barrier complying with IBC Section 2603.4 or IRC Section R316.4 as applicable.

4.2 Attic and Crawl Spaces:

Kooltherm® K10 Insulation Boards, installed with glass fiber tissue facing the interior of the attic or crawl space, may be used for walls and ceilings of attic or crawl spaces without the ignition barrier required by IBC Section 2603.4.1.6, or IRC Sections R316.5.3 or R316.5.4, when all of the following conditions are met:

a. Entry to the attic or crawl space is only to service utilities and no storage is permitted. Utilities include, but are not limited to, mechanical equipment, electrical wiring, fans, and gas or electric hot water heaters and furnaces.
b. There are no interconnected attic or basement areas.
c. Air in the attic or crawl space is not circulated to other parts of the building.
d. Attic ventilation is provided when required by IBC Section 1203.2 or IRC Section R806, as applicable.
e. Under-floor (crawl space) ventilation is provided that complies with IBC Sections 1203.3 or IRC Section R408.1, as applicable.
f. Combustion air is provided in accordance with IMC (International Mechanical Code) Section 701.
g. The insulation is limited to a maximum thickness of 120mm.

5.0 CONDITIONS OF USE

The Kooltherm® Insulation Boards described in this Research Report comply with, or are suitable alternatives to, what is specified in those Codes listed in Sections 1.0 and 2.0 of this report, subject to the following conditions:

5.1 Installation must comply with this Research Report, the manufacturer’s published installation instructions, and the applicable Code. In the event of a conflict between the manufacturer’s instructions and this report, this report governs.

5.2 Exterior walls must be protected by a water-resistant barrier complying with IBC Section 1404.2 or IRC Section R703.2, and by wall coverings that provide the necessary structural wind and seismic resistance between the wall framing members.

5.3 Insulation boards must not be used as a nailing base for siding materials. All fasteners must penetrate through the insulation into the existing wall framing or structural sheathing as required by the wall covering manufacturer’s instructions or the applicable Code.

5.4 Kooltherm® Insulation Boards are manufactured in Pembridge, Leominster, Herefordshire, UK, under a quality control program with inspections by Intertek Testing Services NA, Inc. (AA-647).

6.0 SUPPORTING EVIDENCE

6.1 Reports of tests in accordance with ASTM C1126-15, ASTM E2178-13, and UL 723 (2010).

6.2 Data in accordance with the ICC-ES Acceptance Criteria for Foam Plastic Insulation (AC12), dated June 2012 (revised January 2015).
6.3 Intertek Listing Report "Kingspan – Kooltherm® Insulation Boards".

7.0 IDENTIFICATION

Kooltherm® Insulation Boards are identified on the packaging by a marking bearing the report holder’s name (Kingspan), the product name, the manufacturing location, the Intertek Mark, the Code Compliance Research Report number (CCRR-1066), and thermal resistance value.

8.0 OTHER CODES

This section does not apply.

9.0 CODE COMPLIANCE RESEARCH REPORT USE

9.1 Approval of building products and/or materials can only be granted by a building official having legal authority in the specific jurisdiction where approval is sought.

9.2 Code Compliance Research Reports shall not be used in any manner that implies an endorsement of the product by Intertek.

9.3 Reference to the https://bpdirectory.intertek.com is recommended to ascertain the current version and status of this report.
